

Dear Friends and Colleagues,

It is many years that I am working as Clinician and Researcher of the Inborn Errors of Immunity (IEI) at the Pediatric Immunology Unit of the University of Brescia, in Italy. After having had many opportunities of collaborations with many of you at the ESID meetings and for research projects, I felt I could contribute to the development of our Society.

In the last decade, ESID has given an extraordinary contribution to development of research from all European countries in this field by providing the optimal environment for research collaboration and for exchanging clinical expertise in the recognition and treatment of primary immunodeficiencies.

The Clinical working party has provided the occasion to improve patient care and access to appropriate diagnostic procedures and genetic testing for many patients with IEI. In the next years, the increasing number of patients with PIDs that will be recognized by the increasing number of genetic and immunological tools will require broader participation of ESID members to the definition of Guidelines and Clinical consensus and to provide the appropriate treatment for our patients.

As Chairman of the Clinical working party, I will work to improve the interactions of Clinicians and Researchers in the Clinical working party and in the Society to leverage both the quality of Research and the level of patients clinical care.

For all these reasons I am presenting my application to serve as Chairman of the ESID Clinical working party and asking for your support.

Yours sincerely,

Raffaele Badolato, MD, PhD

Professor of Pediatrics
University of Brescia, Italy
