

Short Bio

Andreea Ioan is currently a fourth-year pediatric resident at Marie S. Curie Children's Hospital, Bucharest, the largest pediatric hospital in Romania.

She studied medicine and graduated in 2015. She studied for one year at the University Claude-Bernard Lyon 1, France, with a particular interest in pediatric emergencies during clinical rotations.

Since February 2021, she has been working in the Immunology Department at National Institute for Mother and Child, Bucharest, under the close supervision of Dr. Alexis Cochino. She has been constantly involved in the diagnosis and management of distinct immune related disorders, ranging from autoimmune diseases such as SLE or JIA to monogenic periodic fevers and to primary immune deficiencies such as familial HLH.

Her current clinical focus is to increase knowledge about IEI among young clinicians in major hospitals to identify more rapidly severe disease forms such as in SCID in the lack of a current newborn screening program and limited experience with HSCT for IEI in our country.
