

Dear colleagues,

I am Qinhua Zhou, an ESID member, 36 years old now. I am an attending pediatrician from Children's Hospital of Fudan University in Shanghai, China, and a former trainee in professor Casanova Jean-Laurent's lab at Rockefeller university in New York from October 2019 to December 2020. My specialty is clinical immunology, I have been working on inborn error of immunity since 2014, I am now an attending physician. Beside doing clinical work on IEI, I also do some research work on it.

I nominate myself in representation of my country. With my own experiences, I would like to do some jobs to help the development of young clinicians and researchers with interest in IEI. During the training period at Rockefeller, I did some research work on the inborn error of immunity underlying severe COVID-19 and some other interesting jobs, I also met many young talent clinicians and researchers at Rockefeller university. I feel the importance of communication of new ideas between young people to do science.

Besides, I have participated several times of Grand rounds and journal club activity, they were excellent. I would like to contribute to the online education like journal clubs or clinical cases. ESID Biennial Meetings are great events of ESID, I would also like to help organize junior events at ESID biennial meetings. I would also like to help organize local events in China to promoting awareness about PID and ESID.

I would like to do some jobs to enhance the platform for the communication of our junior members around the world and for our common career of IEI. In the meanwhile, I will learn from them and harvest friendship. So, with the above reasons and experiences, I nominate myself in representation of my country.

Best regards!

Qinhua Zhou
