

Ondřej Vladyka – Short bio

I have graduated from 2nd Medical Faculty of Charles University in 2023. During my graduate studies I became interested in inborn errors of immunity and joined the team in Department of Immunology in Motol University Hospital for a project aiming to study the T cells in 22q11DS. After graduation, I decided to pursue career of consisting of both clinical and scientific work and currently I am undergoing both PhD and resident training in the Motol University Hospital.

The aim of my scientific work is to study development of the T cells in IELs, and to better understand the mechanisms by which the thymus and the T cells themselves fail to create functioning adaptive immunity in these diseases.
